Welcome to Casablanca - the next chapter for trenchless Morocco

Following the successful launch of Trenchless Morocco in Rabat in 2026, the event moves to Casablanca for what promises to be an even larger and more influential edition.

As Morocco's largest city and economic capital, Casablanca provides the ideal setting to bring together government authorities, utilities, contractors, consultants, manufacturers and infrastructure professionals from across Morocco and beyond.

Morocco's underground infrastructure is rapidly evolving to support continued urbanisation, economic growth and sustainable development. Significant investment in water, wastewater, energy, telecommunications and transport infrastructure, together with preparations for the 2030 FIFA World Cup, is creating unprecedented opportunities for trenchless technology throughout the region.

As investment accelerates, trenchless technology is becoming an increasingly important solution for the installation, rehabilitation and maintenance of essential underground utilities while reducing disruption, improving efficiency and supporting sustainable construction.

Casablanca is home to many of Morocco's leading infrastructure, utility, engineering and construction organisations, providing direct access to asset owners, project developers, contractors, consultants and senior

decision-makers responsible for delivering major infrastructure projects across the country. The city is also recognised as a centre of engineering excellence, with leading academic institutions including École Hassania des Travaux Publics, École Centrale Casablanca, École Nationale Supérieure d'Électricité et de Mécanique and Université Hassan II.

Trenchless Morocco 2027 offers exhibitors and sponsors an unrivalled opportunity to showcase innovative products and services, meet key decision-makers, generate high-quality business opportunities and position their company at the heart of one of Africa's fastest-growing infrastructure markets.

Join us in Casablanca and be part of the future of underground infrastructure in Morocco.

Conference Programme

Conference topics will include, but are not limited to:

- Latest developments in new pipe installation
- Pipe rehabilitation and renewal
- Inspection, cleaning and condition assessment
- National, European and International standards
- Water, sewer, gas, electricity and telecommunications
